Abstract: The Dave Van de Mark Photograph Collection is a visual documentation of many areas that became Redwood National Park in 1968, and many of the areas that were included in the Park Expansion in 1978. The lower Redwood Creek watershed is the focus of this collection. The pre and post logging conditions are explicitly shown in these images. Within the collection there are some photographs of the surrounding areas in Humboldt and Del Norte counties which put the core part of the collection in a broader geographic context. Mr. Van de Mark's purpose was to generate support for creating the park and later, with even more determination, to heighten public awareness for the need to expand the park. Nearly all of the photos were taken by Dave Van de Mark. The collection provides documentation of the disturbed landscapes whose rehabilitation was authorized by Congress in the Redwood National Park Expansion Act (PL 95-250). Additionally, there are three taped interviews with Mr. Van de Mark; one in 1999 and two in 2006. Transcripts for the 2006 interviews are included in this collection.

**Acquisition Information**
Dave Van de Mark initiated communication with Redwood National Park about donating his collection in 1984. Several park employees were already familiar with the collection and its informational value from having used parts of it for planning and management purposes. Between 1984 and when the collection was officially donated in 1988, Van de Mark worked on bringing related parts of the collection together and making notations about dates and locations.

**Biographical Information**
Dave Van de Mark moved to Humboldt County as a young college student in early summer of 1963. He took a summer job in one of the local sawmills and then enrolled in Humboldt State University (then Humboldt State College). He soon became
aware of the effort to build public support for creating a Redwood National Park and joined the Sierra Club to work toward that end. Out of necessity, he became the photographer for the park proponents. He was self-taught in both photography and the developing process.

He was an early member, board member (1966) and then president of the Citizens for a Redwood National Park (CRNP), an Arcata based group whose goal was to be a clear voice of North Coast park proponents, to provide substantive information on the park issue, and to promote park legislation that would benefit the local communities. Sierra Club representatives assisted with the formation of the CRNP but the two organizations were independent from one another, though there was some overlapping membership. (A card file containing member's names and addresses was lost in the 2001 fire that destroyed the Northcoast Environmental Center.)

Once the Redwood National Park was created it became apparent to Mr. Van de Mark and many others that the ongoing logging on Redwood Creek upstream and upslope of the new park was endangering the wellbeing of the park areas, especially the Tall Trees Grove. Dave and many other activists then became involved in a long struggle to expand the park by including more of the Redwood Creek watershed. Dave was employed by the Sierra Club as a Conservation Department Assistant from June 1968 until mid 1970.

Dave was one of a handful of individuals who led educational excursions into the affected areas. A wide variety of persons went on these excursions, including a significant number of public officials from all levels of government. In the Oral History interviews included in this collection Dave shared memories conveying the energy, urgency, and flavor of the park advocacy activities in that era. The photos he took during this time show the extent of the logging and its impact on the watershed. Many of these photographs were used in materials published by conservation organizations and by news publications. Van de Mark's photos were central to educating legislators and the general public about conditions within and surrounding the park. He was certainly one of the central figures in the effort.

Van de Mark's comments in a 1984 letter to the RNP Superintendent about the collection shed some light on the level of effort and commitment the expansion proponents exerted:

"Literally thousands of miles of hiking (no trails mainly); dozens of boat trips down Redwood Creek; perhaps three dozen or more aerial reconnaissance flights; and over 90,000 auto miles were logged in this effort. Of course all the land was private and 'hostile' then. Almost all activities involved secrecy and trespassing (Oh, are there some funny stories I can tell!)...."

"When a crisis needing documentation came up or the time allowed, you did it...."

In 1976 Mr. Van de Mark gave an impassioned statement before the Conservation, Energy, and Natural Conservation Subcommittee of the Committee on Government Operations. In it he mentions the key issues that prompted him, and thousands of other citizens, to push for an expansion of the Park. A copy of this testimony is attached (as a PDF file) in Appendix A.

More biographical information about Dave Van de Mark and his advocacy activities can be found in the transcripts of the two 2006 oral history interviews conducted in conjunction with the processing of this collection. An additional interview, recorded in 1999, is available in audio format, only.

Scope and Content of Collection

The Dave Van de Mark Photograph Collection is a visual documentation of many areas that became Redwood National Park in 1968, and many of the areas that were included in the Park Expansion in 1978. The lower Redwood Creek watershed is the focus of this collection and the on-the-ground pre and post logging conditions are explicitly shown. Additional photographs of the surrounding areas in Humboldt and Del Norte counties put the core of the collection in a broader context. Mr. Van de Mark's purpose was to support the efforts to create the park and, with even more determination, to heighten public awareness of the need for the expansion. Nearly all of the photos were taken by Dave Van de Mark. The collection provides documentation of disturbed landscapes whose rehabilitation was authorized by Congress in the 1978 Redwood National Park Expansion Act (PL 95-250).

The portions of Redwood Creek between the mouth at the Pacific Ocean and the upper boundary of the expanded park comprise the majority of the collection. Other areas covered include Arcata, Humboldt Bay, Mad River, Maple Creek, and some areas of Del Norte County.

Van de Mark, quoting his friend Maynard Munger, started using the phrase "Emerald Mile" to describe a particularly beautiful stretch of Redwood Creek. Immediately it became a rallying cry during both park campaigns. The "mile" is along Redwood Creek near the mouth of Harry Weir Creek and near the Tall Trees. Many park expansion proponents called the Harry Weir Creek, Emerald Creek. An Emerald Creek Committee was formed, made up largely but not exclusively of students from Humboldt State University, and environmentalists from the community. (Dave worked in close alliance with the Emerald Creek Committee though he wasn’t active in organizing or maintaining the group.) Between 1968 and 1978 the park boundaries, when drawn on a map, made a thin curving line along Redwood Creek; thus the area was called "the

worm™. These terms are found in notes relating to the photographs in this collection.

**Arrangement**

Black and white photographic negatives (most are 35mm or 4x5); color negatives, slides, contact sheets, original envelopes, and oral histories make up the collection.

Dave Van de Mark’s date based numbering system is used. A roll with the number 651129 was taken November 29, 1965. Sometimes Mr. Van de Mark did not record the exact day, and on a few occasions the month was not noted either. 00 is used in place of the day and/or month in these instances. A roll with the number 650900 was taken sometime in September 1965. A roll with the number 650000 was taken sometime in 1965. Images with no number whatsoever (about 320) are included after those with a date number. On most days more than one roll of film was shot and comments are provided for each roll’s contents.

Throughout the Container List the "Description", "Notes", and in the list of the original envelopes the "DVM’s remarks" sections convey a wide variety of detail about the location, the event going on, names of persons present, and what Mr. Van de Mark was intending to document with the image. This information greatly enriches the collection. There are distinctions between these terms: "Description" indicates information written on the archival envelopes the negatives were in when the final processing got underway in 2005. "Notes" indicates information supplied by the persons who processed the materials. "DVM’s remarks" is used for the handwritten information that is on the original envelopes.

Most images are black and white. For the small percentage of that are in color they are noted as "color" in the Container List. All of the slides are in color.

Information in the Container List was compiled by Carolyn S. McClurkan and by Drogheda NiFaolain using notes by Dave Van de Mark.

The container list provides:

- Date number
- Roll number
- Title for a roll or rolls
- Description (usually geographic location)
- Number of images for that roll
- Number of Negatives
- Contact Sheet
- Number of Photo Prints
- Notes relevant to that group of images

<td>A road cut was put through this unstable soil in Devil’s Creek which is along the south-western boundary of the 48,000 acre expansion area. Numerous resource experts have warned that there is no economical, technological way to log this area without impacting the park. In fact, the USGS has told us that Devil’s Creek, if logged, has more potential to damage the park then any other area within Redwood Creek.</td>

Series 5  
**Original envelopes 1965-1982, undated**  
Physical Description: 2 boxes.  
Arrangement  
The envelopes that the materials were originally in and that were still present when the 2005-2006 processing effort began are in Boxes 11 and 12. The envelopes were assigned a number that corresponds to the order in which they were processed. That order is maintained in the container list. However the envelopes themselves are arranged by date, from earliest to latest.  
Scope and Content Note  
The envelopes had been emptied during the preliminary processing effort in 1999. The majority of the envelopes relate to the materials in Series 1. The notes on these envelopes were transcribed during processing and are included in the container list.

Scope and Content Note
Public education was one of Mr. Van de Mark's reasons for taking the images and he (and others) gave numerous public presentations in the 1960s and 1970s. Because some slides were showing evidence of mold growth they were digitally scanned during processing in 2006. The scanning was done on a Nikon LS-2000 Slide Scanner or a UMAX PowerLook 2100XL Flatbed using Photoshop 5.5 at both 300 and 900 dpi resolutions and saved as TIFF files. Dave Van de Mark had noticed mold spots on the slides before they were transferred to RNP. At the time of processing the spots appear to be stable and not growing. The digital files are on a dedicated archives server maintained by Redwood National Park.

Scope and Content Note

Box 14 holds the transcripts for the May 2006 and July 2006 interviews. The original and copy cassette tapes for the 1999 and the May 2006 and the DVD for the July 2006 interview are stored with the other Redwood National Park audio/visual materials.

The 1999 interview was conducted by James (Bow) O'Barr and Caroline McClurkan. The May 2006 interview was conducted by James (Bow) O'Barr, Edie Butler and Drogheda (Dao) NiFaolain. The July 2006 interview was conducted by Drogheda (Dao) NiFaolain and recorded in mp3 format.

The two 2006 interviews took place after much of the final processing had been completed by archives assistant Drogheda NiFaolain. These interviews with Mr. Van de Mark were aimed at documenting additional background information about Van de Mark's activism and as well as gathering details about specific images.
