Title: Mark Goldstein papers
Identifier/Call Number: X3451.2006
Contributing Institution: Computer History Museum
Language of Material: English
Physical Description: 5.21 Linear feet, 4 record cartons and 1 manuscript box
Date (inclusive): 1970-1985
Abstract: The Mark Goldstein papers consist of manuals, catalogs, product advertisements, articles and clippings, newsletters, and reference sheets for microcomputer products from the 1970s and 1980s. A significant portion of the material pertains to hardware, peripheral hardware, and software for the S-100 bus home-built computers and the Apple II. In addition to the printed materials, there are program listings and approximately forty 5 ¼ floppy disks containing software.
Processing Information
Collection surveyed by Rita Wang, 2016.
Access Restrictions
The collection is open for research.
Publication Rights
The Computer History Museum (CHM) can only claim physical ownership of the collection. Users are responsible for satisfying any claims of the copyright holder. Requests for copying and permission to publish, quote, or reproduce any portion of the Computer History Museum's collection must be obtained jointly from both the copyright holder (if applicable) and the Computer History Museum.
Immediate Source of Acquisition
Gift of Mark Goldstein, 2006.
Preferred Citation
[Identification of Item], [Date], Mark Goldstein papers, Lot X3451.2006, Box [#], Computer History Museum.
Biographical/Historical Note
Mark Goldstein is President of the International Research Center and a self-proclaimed technophile. As of 2016, he has worked for 18 years in electronic and computer engineering, including 12 years managing engineering teams and projects. During his collecting period, he worked first as an R&D engineer at MicroAge and then as a manager in hybrid test engineering at Medtronic.
Scope and Content of the Collection
The Mark Goldstein papers consist of user manuals, catalogs, product advertisements, and reference sheets for microcomputer products from the 1970s and 1980s from various technology companies. A significant portion of the material pertains to hardware, peripheral hardware, and software for the S-100 bus home-built computers and the Apple II. Many software manuals are photocopies, not originals. Items of note include catalogs from MicroAge, S-100, 6502 Program Exchange, and Computer Learning Center, as well as program listings from the 6502 Program Exchange and Apple II programs. Apple II promotional material and technical literature, such as About Your Enhanced Apple IIe: User's Guide (1984) and Apple II: Cable and Connector Guide (1982), are included. The collection also holds clippings and photocopied articles from 1974 to 1985 about microcomputer hardware, software, and programming, as well as newsletters, including The Digital Group Flyers #1-15 and JUDGE: Joint Users of Digital Group Equipment #1-5. In addition to the printed materials, there are approximately forty 5 ¼ inch floppy disks containing software.
