## **Rudolf W. Becking Collection 2003.04**

Becking (Rudolf W.) Collection

Finding aid prepared by Adrienne R.S. Harling, MLIS and Edith Butler, MA, CA. Help was provided by Suzanne Guerra, Joan Berman, and Tasha Becking Leonard

Processing of this collection was funded by the Andrew W. Mellon Foundation, and administered by the Council on Library and Information Resources (CLIR), Cataloging Hidden Special Collections and Archives program.

Humboldt State University

Arcata, CA, 95521-8299

(707) 826-3441

2011

---

**Title:** Rudolf W. Becking Collection

**Identifier/Call Number:** 2003.04

**Contributing Institution:** Humboldt State University

**Language of Material:** English

**Physical Description:** 122.0 Cubic feet94 Record Storage Boxes, 9 Oversize Boxes

**Date (bulk):** Bulk, 1940-2005

**Date (inclusive):** 1850-2010

**Abstract:** Rudolf Willem Becking was a professor of Forestry and Natural Resources at Humboldt State University from 1960-1983. He did extensive work in Northwestern California. His research interests included Redwoods, sustainable forestry (Plenturung), plant community ecology (Phytosociology), serpentine endemics, the Marbled Murrelet, timber cruise methodology, and many other topics. He worked in the Great Smoky Mountains in the 1950s-1960s and again in the 1970s. He did additional scholarly work in Indonesia, the USSR and in China. Becking also participated in political processes in the Northern California region. Highlights include involvement in the establishment and later expansion of Redwood National Park (1960s and 1970s), municipal environmental issues related to the city of Arcata, California and Humboldt Bay in the 1970s and 1980s, revision of the California Forest Practices Act in the 1970s, and many other regional environmental issues.

**Language of Materials:** English

**creator:** Becking, Rudolf Willem, 1922-2009

#### **Access**

The collection is open for research.

#### **Copyright**

Copyright to the unpublished Becking material is the sole property of Humboldt State University Library. To obtain permission to publish or reproduce, please contact the Special Collections Librarian.

#### **Aquisition Information**

In 2003, Becking moved from his Arcata, California home office and donated the first of three installments of what is now the Rudolf W. Becking Collection to the Humboldt State University Library. Becking sent the second installment when he moved from Oregon to Utah. The last installment came after Becking's 2009 death, arriving in 2010. The first two installments were packed by Becking, and the last installment was packed and shipped by family from Becking's final residence in Utah.

A number of foreign language books relating to forestry and botany were not accessioned by HSU. The majority of these books were from or about the Netherlands, Indonesia, India, Fiji, China, Japan, and the USSR.

#### **Biographical Information**

Rudolf Willem Becking was born in 1922 in Dutch-occupied Indonesia to a Dutch family. He had an early interest in the natural sciences that he shared with his brother and father. During World War II, Becking was captured as a Prisoner of War by the Japanese. He received two forestry degrees from Wageningen University in The Netherlands in 1952. Becking married H. Louise Sheltema, and they moved together to Seattle, WA, where he received his PhD from the University of Washington in 1954. He had brief employment with the Dutch Forest Service and universities in New Hampshire, Pennsylvania and Alabama before being hired at Humboldt State University in 1960. He retired from HSU in 1983, but remained an active professor emeritus, teaching classes and sponsoring graduate students for many years after. Both Becking and his wife died in 2009 and were survived by all three of their children.

Becking lived the majority of his life in the United States, but had significant international influences from being raised in Indonesia, attending college in The Netherlands, and traveling extensively throughout his life. Thus, Becking's approach to forestry and botany were unique amongst his American colleagues. For example, Becking was a strong advocate of Plenturung, an all-aged sustainable harvest model, at a time when even-aged harvest (clear cutting) was central to American forestry. In addition, Becking practiced Phytosociology, a technique of plant community analysis that had international support but very few American proponents. Throughout his career in the United States, Becking corresponded with a vast network of international colleagues.

Although primarily identified as a forester, Becking's work was interdisciplinary. In addition to forest growth and yield, he did research on plant and forest community ecology, taxonomy, and plant biology. He was a specialist in dipterocarps and redwoods, and did significant work with serpentine endemics, the lichen *Usnea longissima*, and forest/plant communities of the Great Smoky Mountains. Soil analysis was essential to his forest and plant research. Becking also did substantial research in ornithology (though he considered himself an amateur), primarily focused on the old-growth-forest-dependent

---

Marbled Murrelet. Becking was a skilled illustrator and used his artistic ability as a tool in his scientific work.

Becking was a citizen activist who focused on environmental management issues. During his long-term residence in Arcata, California, he engaged with the City of Arcata's management of municipal transportation, waste, and forests. Becking was elected onto the Arcata City Council in 1972. Through letter writing, speaking, community organizing and other campaigning, Becking also worked for ancient forest conservation and improved forest policy. He was involved in many regional issues including the establishment and expansion of Redwood National Park, stopping the building of the Gasquet-Orleans Road (G-O Road), and the critique of numerous proposed timber sales on public lands. Becking worked on environmental protection of Humboldt Bay, proposed (with Deane B. Mather) the development of a regional recreation area he called the "Tri-Lake Plan", and advocated against the proposed Butler Valley Dam.

As a teacher, Becking left a lasting impression on his students who have described him as challenging, approachable, empowering and inspiring. He formed mentorships with students that often became lasting friendships. He was known for engaging his students in scientific studies that involved real-world field, lab and data analysis work. He integrated his own research interests and projects with his forestry and natural resources curricula.

Becking attended the Humboldt Unitarian Fellowship and occasionally gave talks there that provided a view of how his work as a scientist and activist intersected with his spirituality.

For more biographical information, see [BEN Botanical Electronic News ISSN 1188-603X No. 421 February 4, 2009](#), written by Adolf Ceska (with help from the Becking family).

### **Scope and Content**

The Rudolf W. Becking Collection is documentation of the professional and political work of Dr. Rudolf Becking from the time of his post secondary education in the 1940s and 1950s, through his teaching career in the 1960s-1990s, and his continued work until his death in 2009.

The collection contains primarily textual materials including research notes, data, correspondence, publications, and reports. There are also non-textual materials including photographs, slides, maps, posters, illustrations, sound recordings, and computer files.

Major topics covered include all-aged forest management (Plenturung), plant community ecology (Phytosociology), old growth conservation, serpentine endemic plants, redwood biology, redwood forest ecology, timber cruise methodology, Marbled Murrelets, and the municipal environmental management of Arcata, California.

### **Processing Information**

The Becking Collection came to HSU in three installments, and processing began between the arrival of the second and third installments. When the materials were packed to be delivered to the library, their original order was disrupted. At the library, to prepare for final processing, HSU Archivist Edie Butler and Processing Archivist Adrienne Harling sorted the collection according to topic and geographic area.

Processing was completed primarily off campus, in several installments of 10-20 boxes at one time. The collection was processed efficiently, and series were arranged at different levels of detail (based on need and perceived research value).

Becking used recycled manila envelopes and 3-ring binders to organize his materials. He labeled most envelopes and binders. When processed, materials were transferred out of the envelopes and binders and into file folders and archival storage boxes. Folder contents were transferred in their original order. Becking's labels were used as folder headings when available, and the processing archivist provided additional information and generated folder headings for unlabeled materials (differentiated from Becking's labels with brackets []). Becking's spelling, grammar and punctuation were not edited when his labels were transferred to file folders.

There were many loose materials that came with the collection, which were sorted according to collection series and labeled with the terms "loose" and/or "miscellaneous" without further description. The lack of description of these materials should not be mistaken for lack of research value, and researchers are encouraged to scan these folders for content within each series they are using. Items that were mixed into envelopes or binders of unrelated materials were not moved. Significant quantities of such out-of-place materials were noted in the series descriptions when identified.

Processing of the Rudolf W. Becking Collection was generously funded by the Andrew W. Mellon Foundation, and administered by the Council on Library and Information Resources (CLIR). The Humboldt State University Library was awarded a Cataloging Hidden Special Collections and Archives grant from 2010-2012, "Uncovering California's Environmental Collections," in collaboration with eight additional special collections and archival repositories throughout the state and the California Digital Library (CDL). Grant objectives included processing of over 33 hidden collections related to the state's environment and environmental history. The collections document an array of important sub-topics such as irrigation, mining, forestry, agriculture, industry, land use, activism, and research. Together they form a multifaceted picture of the natural world and the way it was probed, altered, exploited and protected in California over the twentieth

---

century. Finding aids are made available through the Online Archive of California (OAC).

### **Arrangement**

The series level arrangement reflects Becking's roles as researcher, activist, and teacher, with sub-series broken out by topic or geographic area. Folders within series are loosely grouped together according to topic.

Different material types are not separated except for sound recordings, computer files and oversized items.

### **Related Collections**

Pamphlet Collection at Humboldt State University Library's Humboldt Room – For many years, Becking brought individual unpublished documents such as correspondence into the Humboldt Room to make available to researchers. These items were incorporated into the HSU Library's Humboldt Room's [Pamphlet Collection](#) and assigned subject headings to be used for retrieval.

Redwood National Park – Two collections at the National Park Service Redwood National Park headquarters in Orick, California are directly related to materials in Humboldt State University's Rudolf W. Becking Collection. Becking donated some of his papers to the National Park Service in the late 1990s (Rudolf W. Becking Collection, Catalog Number: REDW 27748), before his larger collection came to HSU in 2003. They include documentation of Becking's involvement in the establishment of Redwood National Park. The collection at Humboldt State University is focused on the expansion of the Park and the movement to protect the Emerald Creek Watershed. The collection at Redwood National Park's office is focused on the initial establishment of the park.

Another collection at the Orick office is the [Dave Van de Mark Photograph Collection](#) (Catalog Number: REDW 17722). The collection includes photographs that document the Redwood National Park region and land management activities in that region. They were taken in an effort to gather support for the creation and later expansion of the Redwood National Park.

Zoological Museum University of Amsterdam, The Netherlands – Becking and his brother (J.H. Becking) developed an extensive egg collection from Java, Indonesia, starting as early as the 1930s. They donated their joint collection to the [Zoological Museum](#). Related materials can be found in the Rudolf W. Becking Collection in "Biography" and "Research and Writing : Marbled Murrelet".

Humboldt State University Vascular Plant Herbarium - Several boxes of plant specimen were included in Becking's donations to the Humboldt State University Library. For proper care, these plant specimens were transferred to the [Humboldt State University Vascular Plant Herbarium](#) in 2011.

Humboldt State University Nonvascular Plant Herbarium - Several boxes of mounted lichens and bryophytes were included in the third installment of Beckings' donations to the Humboldt State University Library. The lichen and bryophyte specimens were mounted onto index cards that included metadata. For proper care, these specimens were transferred to the Humboldt State University Nonvascular Plant Herbarium in 2011.

## Biography Series 1

### Scope and Contents note

Materials relating to Becking's personal life cover Becking's employment, family, spirituality and philosophy. A number of documents pertaining to employment reveal professional tension with some colleagues.

Family materials include Christmas letters from the late 1990s and early 2000s, and publications and correspondence of Becking's family members. Of note is correspondence between Becking and his brother regarding their joint Java egg collection and some journals containing information provided by their colleague/mentor, zoologist Max Bartels. The Becking Java egg collection is now housed in the Zoological Museum University of Amsterdam, The Netherlands.

Programs and notes from several talks at the Humboldt Unitarian Fellowship present Becking's spiritual perspective on topics such as the Headwaters controversy, humans and their relationships to plants, differences between childhood times and current times, "ecoactivism", "ecocide", salmon, the legal standing of trees, and other topics.

The Biography series also includes documentation of two instances in which Becking defended his professional integrity to institutional authorities:

**Becking Fire/Professional Competency Case:** In the 1970s, Becking was implicated as the responsible party for a fire that started in Freshwater Forest after Becking and his students had been burning test plots. The materials related to this incident include Becking's detailed account of the events of the fire and how it was responded to, as well as photographs of the plots and burned areas.

**PFR license case:** In the 1990s a complaint was filed against Becking to the Professional Forester Registration (PFR), and this organization disciplined Becking with a "Private Letter of Reprimand". The complaint was filed with regards to Becking's declaration in a lawsuit filed by a Del Norte County landowner against a neighbor, claiming that they had suffered personal injuries from spraying of Garlon, an herbicide. Becking's declaration was in support of the effort to stop additional herbicide spraying. The material in these folders includes Becking's declaration and correspondence regarding the complaint, disciplinary action taken against Becking by the RPF, and Becking's original declaration. The correspondence shows that Becking himself publicized the matter even though the PFR's letter was private.

**Forest Ecology and Management**

**Douglas Fir (PhD)****Scope and Contents note**

Notes, data, soil profiles, literature, other work Becking did as a student at University of Washington, and writings based on his PhD data. Becking received his PhD in 1954. His dissertation was entitled Site Indicators and Forest Types of the Douglas fir Region of Western Washington and Oregon and included phytosociological analysis of Douglas fir forest types of over 300 plots in Washington State.

**Redwood****Scope and Contents note**

Becking studied all three species of redwood: *Sequoia sempervirens*, *Sequoiadendron gigantea*, and *Metasequoia*. Some of the topics Becking pursued were burl development, vegetative propagation of redwoods, albino redwoods, international distribution of redwoods, redwood deformities and fasciations, fossil redwoods, redwood genetics, and more.

**National Science Foundation (NSF)****Scope and Contents note**

Data, photographs, negatives, codes, computer programming information, maps, report drafts, related writings, and publications, all pertaining to three National Science Foundation (NSF) grants Becking received for research on Redwood Forest plant communities. Materials from Becking's 1962 regeneration survey of the Bull Creek watershed for the State of California's Division of Beaches and Parks is also included due to its relatedness to Becking's NSF research.

The three NSF grants were awarded between the late 1960s and 1971. They funded Becking's research on Redwood Forest plant communities, the effects of the 1964 flood on redwood vegetation, and the conditions of natural redwood regeneration. The research was conducted primarily in Humboldt Redwood State Park, but also occurred in redwood regions within their California distribution range. The three grants were connected, as Becking described: GB 4690 "extends the research findings of the previously published Final Report of NSF Grant GB# 3346, published January 15, 1967. It further summarizes research still in progress under the NSF Grant GB # 6310 which was awarded to the Redwood Research Institute, Inc., Arcata, California on May 15, 1967".

A summary of objectives of NSF Grants 3468, 4690, and 6310, based on descriptions in final reports, is as follows: Redwood Forest Plant Communities - 1) "To provide comprehensive descriptions of the plant communities in the redwood forests of Northern California including a vegetational classification which can serve as a reference frame work for future vegetational research.", 2) "To provide computer analysis of phytosociological inventory records of the Redwood Forest Communities.", 3) "To correlate vegetational patterns with environmental factors including soil, climate, topography, flooding, biotic factors, and human influences (logging, fire) and to assess these interrelationships." Floods and Redwood/Riparian Vegetation - 1) "To study the December, 1964 flood impact upon redwood vegetation and to monitor the flood effects with the progression of time. This includes the measurement of temperatures, precipitation and soil moisture trends per month, and the continuous reinventory of redwood regeneration ring plots in the forest environment.", 2) "To study the riparian vegetation and its effects upon the floods and the ecological significance of riparian vegetation in flood protection., 3) "To study the ecology and change in environment of the riparian plant communities in relation to flooding, silt deposition, and recurrence of flooding. To establish permanent reference plots to study successional trends in vegetation, changes in environmental conditions, and their effect upon flood height and frequency." Redwood Regeneration - 1) "To study the natural regeneration of the redwood forests by permanent seedling plots. To measure variation in the most important ecological variables such as temperature, light intensity, soil moisture, and soil pH, and to determine the ecological significance of these factors upon redwood seedling development and survival."

**Plenturung****Scope and Contents note**

Correspondence, notes, grant proposals, private contracts, comments on THPs, publications, and workshop materials pertaining to a forestry approach that Becking advocated throughout his career, called "Plenturung". Becking described Plenturung as a "unique forest management system to maintain constantly a dynamic all-aged stand structure while periodically harvesting timber at controlled monitored sustainable levels." and a "very old system dating from the medieval coppice forests. It consists of timber harvest without clearing the land, only trees cut which were needed and the rest of the forest was left. Individual tree selection system. Gradually the uneven-aged management system has been evolved by practice of local small forest owners and farm foresters. Aim is now ultimately toward a free, elastic type of management with the basic ideas of selection forest and stand improvement".

Becking worked some with the Mendocino Real-Wood Co-op, consulted for private property owners, commented on THPs and forestry practices, and taught public workshops about Plenturung. In the 1990s, Becking was active in advocating that Plenturung forestry techniques be applied to the Jackson State Demonstration Forest (JSDF) and other properties in Mendocino County (including the Little River Airport property).

|                   | Correspondence, photographs, slides, interview notes, and documents Becking gathered for a 1968 grant he received from the Humboldt State College Foundation. The funding was for collecting images and information regarding the history of Redwood logging in the Humboldt County region. Also included is a set of photos Becking collected in 1954 of Allis-Chambers diesel crawler tractors from the manufacturer, Humboldt State College school forest photos apparently depicting early logging there, and materials relating to the history of reforestation in Humboldt County. |
|                   | Many documents are specific to Humboldt County, including:   |
|                   | 1. "A History of the Plywood Industry in Humboldt County" by Walt Noah (1958).   |
|                   | 2. "First Evidence of Use of Earth mounds in the Earliest Redwood Logging in Humboldt County, California" by Rudolf W. Becking and Joedy Coletti (unpublished manuscript and related correspondence, 1972)   |
|                   | 3. an article in Western Conservation Journal's September-October 1953 issue entitled "Humboldt's Forest Future" (Box 18, Folder 18)   |
|                   | 4. an unidentified article entitled "Eureka Redwood Lumber Company" (Box 18, Folder 18)  |
|                   | 5. "Forestry: What it Means" by Donald Bruce, copy provided "compliments of the Humboldt Redwood Reforestation Association". (Box 18, Folder 18).  |
|                   | 6. "Clean Logging in the Redwoods" by Eugene A. Hofsted, Forester, Arcata Redwood Company, 1961, (Box 18, Folder 29).  |

**Tallest Trees****Scope and Contents note**

Correspondence, data, notes, and publications related to height-record-breaking trees of different species throughout the world. Of particular note is a redwood tree in Dyerville that Becking measured and declared was taller than the record at the time. After remeasurement, however, Becking determined that he had made an error the first time and that the tree was shorter than the record holder after all. This story got political and press attention.

**Ring-O-Grams****Scope and Contents note**

Data from Becking's "Ring-O-Gram" analyses, collection permit applications, and correspondence including Becking's communication with CalTrans (regarding data collection from "fallen giant" trees). Ring-O-Grams are the graphical representations of cross-sections of fallen trees. Tree rings, rot, fire scars, and other data are represented on a data sheet to visually record the information. It is unclear whether this method was an innovation of Becking's. Tree genera covered include Abies, Chamaecyparis, Cryptomeria, Pinus, Pseudotsuga, Sequoia, Tsuga, Thuja, Cryptomeria, and more.

**Indonesia****Scope and Contents note**

Correspondence, reports, maps, contract, and clippings pertaining to the following:

1. In the 1970s Becking went on leave from HSU to work under contract for the South East Asian Ministers of Education Council's (SEAMEC) Regional Center for Tropical Biology (BIOTROP) in Bogor, Indonesia to (in Becking's words): "help establish BIOTROP as a regional supported South-East Asian Center in tropical biology training and research".
2. Becking was a (in his words): "FAO Forest Inventory specialist for 18 months till the FAO Forestry mission was discontinued by the FAO".
3. Becking worked on protesting the Mega-project in Central Kalimantan that would (in his words): "convert over one million hectares of peat-swamp forest into a rice-producing area".
4. Dipterocarp research
5. Deforestation in Indonesian forests.

**Scope and Contents note**

Materials from Becking's 1986 participation in a foreign exchange program to the USSR, sponsored by the National Academy of Sciences. He spent three months in Tallinn, Estonia and Novosibirsk to research *Sequoia sempervirens*. Becking had previously planned on a broader research focus and longer visit to the USSR, but shortened his trip due to disappointment during the planning phase.

**Other Forestry****Scope and Contents note**

Materials pertaining to unique forestry interests of Becking's represented by a relatively small amount of materials, from one to a few folders. Topics in this subseries that consist of multiple folders include Becking's research and manuscript on the African tree species *Aucoumea klaineana*, organizational documents for the Redwood Research Institute, Inc., and materials relating to the environmental management of Ski Areas.

**Botanical Studies****Scope and Contents note**

Becking's botanical work ranged from determining taxonomic differences between individual plant species (such as *Hastingsia*, *Oxalis*, *Asarum* and *Salix* species) to classifying and describing entire plant communities. Phytosociology, a method of plant community classification originating from J. Braun-Blanquet's Zurich-Montpellier school, was central to Becking's approach to plant and ecosystem science. This approach, commonly practiced in Europe, has had significant criticism in the United States and Becking was one of the strongest advocates for its practice within the US in his time. Becking also studied various aspects of serpentine-related flora, primarily in the Klamath-Siskiyou region of Northeastern California and Southern Oregon. Materials relating to these studies can be found in the sub-subseries *Darlingtonia Bogs*, *Hastingsia* and *Serpentine Floras*.

Note to researchers: Becking studied different plants at the same time and sometimes from similar places, so researchers interested in a particular plant or sub-subseries should scan the other sub-subseries to find additional content about their topic of interest. For example, there are scattered materials related to *Asarum* with the sub-subseries *Hastingsia*, and vice versa, due to Becking having researched these two plants in similar areas at similar times and occasionally kept his notes together about the two.

**Phytosociology****Scope and Contents note**

Phytosociological relevés/synthesis tables, technical information relating to the computer programs used to generate relevés/synthesis tables, correspondence, manuscripts and other writings, and materials from Becking's trips and activities relating to the International Association of Phytosociology. Of note is a description of the codes and acronyms that Becking developed for his synthesis tables (RWB handout #141 for NRPI 420). Please note that phytosociological data and information can be found throughout the Becking collection, often as a part of a research project of a specific plant community or place.

|                   | <b>Scope and Contents note</b>  |
|                   | Correspondence, permit applications, work related to Becking's unfinished manuscript Sand Dune Flora, data, and other materials. Becking studied the plant communities of the Sand Dunes in Humboldt County for many years, including conducting phytosociological relevés. He studied sand dune formation, dune restoration, control of non-native species, native plant communities, and impacts from Off-Road Vehicles and other activities. Becking began writing an illustrated Sand Dune and Marsh flora in the 1990s, similar in concept and format to Pocket Flora of the Redwood Forest. He was also interested in birds in the Sand Dunes, and at one point he approached the managers of the Lanphere Christenson Dunes about conducting an avian study in the preserve. This proposal was abandoned due to concern about how his going off trail would negatively impact the dune flora. Some materials relating to salt marshes are also included. |

**Hastingsia****Scope and Contents note**

Gray literature, handwritten notes by Becking regarding *Hastingsia* chromosomes, pollen, collections at various herbariums, bulb plantings at HSU greenhouse, data analysis (computer printouts from vegetation analysis software), material related to a USFS contract for an ecological investigation of *Erigeron* and *Schoenolirion* (ecology and distribution of both genera), drafts of manuscripts, and correspondence. Also included are Becking's *Hastingsia* illustrations and correspondence with editors of "Flora of North America" about their possible inclusion of them into their book (1998), correspondence between Becking and Kenton Chambers of Oregon State University regarding comments on Flora North Americana Project (2000), and correspondence between Donald Heinze and Becking regarding Heinze's request for illustrations for his book "Plants of the Siskiyou Mountains and Valleys" (2001).

Of special note: Becking published a description of a new species (*Hastingsia atropurpurea*) in 1986 in the botanical journal "Madroño". In 1997, botanists F.A. Lang and P.F. Zika published a paper in "Madroño" about their conclusions that *Hastingsia atropurpurea* was not a distinct species from *Hastingsia bracteosa* as Becking had proposed. At around the same time, Becking had developed a manuscript entitled "Annotations to *Hastingsia* (Liliaceae) nomenclature" which was submitted to "Madroño" as well. Becking's manuscript was rejected by "Madroño" editors and reviewers due to the preferred conclusion of Lang and Zika, and there is significant correspondence related to this controversy.

**Pocket Flora****Scope and Contents note**

Materials from Becking's "Pocket Flora of the Redwood Forest" (PFRF) manuscript (published by Island Press in 1982), an updated version of the manuscript Becking sought publication of in the 1990s, and an unfinished manuscript Becking referred to as "Sand Dune Flora". Materials include illustrations, notes, worksheets and text drafts for plant families included in PFRF (and possibly intended for the Sand Dune text), illustrations, negatives and plates, floral diagrams, and correspondence with Island Press regarding PFRF publication and sales. Becking employed students to help him prepare the PFRF text, and some communications with them are also included.

"Pocket Flora of the Redwood Forest" featured Becking's original botanical illustrations and keys to the plants commonly found in Redwood Forests. Island Press eventually stopped printing this title. However, starting in the late 1990s, Becking began updating the book and looking for a publisher to reprint it. He was not successful in finding a publisher and appears to have been continuing to work on this project at the end of his life.

Becking also worked on a "Sand Dune Flora" with the same format he used for PFRF. Becking kept many of the documents and materials for the Sand Dune flora together with his Redwood flora materials.

Some materials came to the collection later than the rest. Those delivered to the library after Becking's death included quantities of loose and unsorted materials. It is recommended that researchers investigate these folders of unsorted loose materials.

There are some items included in this subseries that have a broader scope than the Redwood or Sand Dune floras, including an inventory of Becking's botanical drawings which includes other habitats such as Serpentine.

## Soils

### Scope and Contents note

Contents of 15 binders of soil profiles Becking called "sputograms", collected from his vegetation plots. Twelve of the binders were labeled 1-13 (Binder 2 was not found). Also included are materials specific to soils and soil science that were found loose throughout the collection, (some pertaining to northern California and to Humboldt County), including Becking's manuscript on the sputogram technique.

Becking made sputograms by mixing a small sample of soil with his own saliva and mounting it onto an absorbant paper. He did this for each soil horizon, resulting in a complete soil profile for a given plot. Once the paper had dried thoroughly, he mounted the profile onto a backing paper and made notes about the site and the soil.

Corresponding vegetation plot numbers are located on each individual sputogram, so correlating this soil profile data with related data from specific plots is theoretically possible.

Many of the vegetation plots were related to National Science Foundation grants Becking received in the 1960s for research on Redwoods. Also included are sputograms from Indonesia, Canada, and other places.

Researchers should note that Becking's sputograms are integrated into Becking's work and can be found throughout the collection. In general, folders elsewhere in the collection containing sputograms can be identified by the term "includes soil profiles" included in the folder heading.

**[Loose, misc, includes soil profiles] 1980s, 2000s****Great Smoky Mountains****Scope and Contents note**

Correspondence, reports, data, field maps, and substantial literature associated with Becking's research in the Great Smoky Mountains. Includes some unrelated documents (primarily from the International Association for Vegetation Science field trip of 1976) that were not separated because Becking kept them with his Smoky Mountain materials.

Becking summarized his research in the Great Smoky Mountains National Park this way: "In 1948, Dr. Robert H. Whittaker established the first series of 13 vegetation plots in different plant communities as a part of a survey of insect communities. In 1955, these research plots formed the basis for the publication of a classification of vegetation patterns of the Smoky Mountains [published by Whittaker in 1956]. Between 1959 to 1962 [Whittaker and Becking] expanded this vegetation research and reinventoried these research plots for biomass productivity."

In 1976 Becking was funded by the Oak Ridge National Laboratory to resurvey the Whittaker/Becking plots in the Great Smoky Mountains National Park as well as to establish permanent markers for them so that they could continue to be reinventoried in the future. Becking wrote that the objectives of this study were:

1. "To summarize changes in southern forests since earlier [studies by Whittaker and Becking].
  2. To project vegetational impacts to be anticipated from climatic change (including 1° to 5° C warming over the next century).
  3. To advise [Oak Ridge National Laboratory] and cooperating organizations on feasible ways to predict and monitor ecosystem changes in forests."
1. Oversized : Research and Writing : Great Smoky Mountains

**Marbled Murrelet****Scope and Contents note**

Correspondence, original data and writing, and publications. Original data relates to measurements of preserved Murrelet skins from museum collections throughout the west, identified Murrelet nest locations, found Murrelet eggs and egg shells, found live juvenile Murrelets and accounts of their care and survival, Murrelet critical habitat characteristics, and other topics. Correspondence includes information queries about methods for surveying Murrelets. Also included are Becking's original illustrations of his live observations, museum specimens, nest maps and habitat structure diagrams.

Becking identified himself as an amateur ornithologist in his pursuits of Marbled Murrelet-related research. He studied juvenile states and breeding biology of Marbled Murrelet, the genus *Brachyramphus*, and (in his words): "if there are racial differences in the marbled murrelet". Becking studied Murrelets throughout the world, including Japan and the USSR.

Some content does not relate directly to Marbled Murrelets, such as correspondence about placing Becking's egg collection from Java in a repository, Becking's early studies of eggs, nests and birds of Indonesia, a project in which Becking developed a standardized way to measure eggs without damaging them, and a project in which Becking (in his words): "developed and standardized a unique measuring system of bird nests with a full description of nest materials". This material was not separated because Becking kept it with his work on Marbled Murrelets.

1. Biography (for additional information about the Java egg collection)
2. Research and Writing : Botanical Studies : Usnea (for materials from Becking's study of avian use of lichen)
3. Oversized : Research and Writing : Marbled Murrelet
4. Becking's Digital Collection (Becking Diskettes boxes 1 and 3)

**Project Egg****Scope and Contents note**

Becking's work to develop a standardized formula for measuring egg dimensions, correspondence with oologists, literature reprints, etc. It also includes Becking's write up summarizing the (in his words): "egg dimension and shape project".

Becking researched what kind of technology would allow the most precise measurements of eggs without damaging them. Becking sought to develop a standardized formula for quantifying egg size and shape so that he could safely increase access to old and fragile eggs in museums. He measured and described eggs to detect variation in egg size and color within a clutch.

### Maps

#### Scope and Contents note

Maps Becking kept separate from related data or documentation. Many of the maps are annotated, including some with plot numbers. Some were originally in envelopes with labels and others were loose without labels. Information from these maps may correlate to data and documentation in other subseries, such as botanical studies, soils, and forest ecology and management.

#### See Also

Plot numbers on these maps may be correlated to the plot numbers found in:

### Other Research

#### Scope and Contents note

Materials from unique research interests of Becking's that are not directly related to other series. In general, the topics are represented by one to a few folders. Topics covered in multiple folders include Mima Mounds, the Azalea Reserve, and watershed management and ecology. The Azalea Reserve files include notes and publications regarding vegetation management at the Azalea State Reserve in Arcata, as well as the history of the park and information about rhododendrons, soil profiles, and bird inventory data from within the reserve.

Box 51, Folder 26

**[California Riparian Study Program] 1979**  
**Activism and Civic Involvement** Series 3

**Scope and Contents note**

Becking consistently sought information about political issues that were important to him, and worked to influence environmental policy and management. Becking's efforts were focused on the Northwestern California region, but extended at times to broader policy issues. Becking studied specific issues in depth, and expressed his opinions about them through letter writing and participation in campaigns. He advocated for infrastructure development for bicycling and public transportation in Arcata and on the HSU campus. He supported environmental conservation through the establishment and later expansion of Redwood National Park, and through improved regulation of the timber industry. He kept informed of and commented on factors effecting water quality in Humboldt Bay.

---

**Arcata**

**Scope and Contents note**

Materials from Becking's efforts to stay informed of and contribute to the management of the city of Arcata, California. In 1972, Becking was elected onto the Arcata City Council. Throughout his years as a resident of the city, Becking was active in municipal environmental issues, including management of the Arcata Community Forest and of city waste.

**Transportation**

**Scope and Contents note**

Correspondence, public comments, gray literature and press coverage of various transportation issues in Arcata and the surrounding area, including the Arcata Freeway project, the Arcata Bike Master Plan, HSU Parking, and related topics. Becking was concerned about the effects of transportation planning on ecological factors such as native vs. nonnative landscaping, use of herbicides, wildlife passage including fisheries passage in stream crossings, and how transportation planning effects safety for alternative modes of transportation such as walking and biking. Becking's work with the Bike Master Plan led to smaller communities across the country contacting him to gather information about how to create a similar plan for their communities. He advocated for mass transit development and improvement instead of freeway improvement. Also included are materials about the HSU general plan and Becking's opposition and concerns about the construction of the Jolly Giant dormitory structure. He often addressed this and campus parking issues together.

**Wastewater****Scope and Contents note**

Correspondence, clippings, planning documents, and literature pertaining to wastewater reclamation science and Arcata and Eureka's wastewater treatment facilities. In the 1970s, pollution into Humboldt Bay from Arcata/Eureka sewage was detected and the cities both began developing plans to redesign their wastewater treatment systems. Becking actively supported the idea of developing a wastewater recycling facility using marsh plant communities to biologically treat Arcata's wastewater. Both scientific and political discussion is represented.

**Solid Waste****Scope and Contents note**

Information about and data from Becking's 1972 volunteer-run survey of Arcata garbage, as well as publications, correspondence, notes, and a small amount of photographs pertaining to solid waste management and recycling municipal waste. In Becking's words, volunteers for the Arcata garbage survey determined the "% composition and weight of glass, aluminum, other metals, newspaper, other paper, plastic, raw garbage, and miscellaneous materials." Becking supported the development of the Arcata Recycling Center, and his comments to the city in 1997 when the center was at risk of closure are included.

|                   | <b>Scope and Contents note</b>   |
|                   | City documents, correspondence, clippings, and Becking's comments on the management of Arcata city forests. Becking expressed his concerns and ideas to the City of Arcata's Forest Management Advisory Committee, to the City Forester (including Gary Miller during his time as Forester) and in local publications. He was critical of cruise methodology, the public participation process, spending of timber revenues, accounting and documentation, and stand management strategies. Becking promoted Plenturing forest management being applied to Arcata city forests, and he applied for the position of city forester in 1984. Includes coverage of the potential acquisition of the McDowell property adjacent to the Arcata Community Forest in the 1990s, a Christmas Tree Farm Project in the 1980s, a Nonindustrial Timber Management Plan (NTMP) that was proposed in 1999, and the controversial Sunnybrae Timber Harvest Plan of Sierra Pacific Industries that an organization led by Mark Lovelace called the Sunnybrae Arcata Neighborhood Association (SANA) actively opposed in the 2000s. |

### Humboldt Bay

#### Scope and Contents note

Materials regarding Proposition 20 of 1972 (a controversial "Coastal Initiative" that Becking supported for its preservation measures), proposed Off Road Vehicle (ORV) parks on the North Spit/Samoa Peninsula (and other environmental threats to the Sand Dunes in the Humboldt Bay region), maintenance dredging and illegal fills in the Humboldt Harbor area, and the "Exxon Project" (proposed construction of an oil jacket assembly yard on Humboldt Bay that Becking opposed). Becking was chairman of the Humboldt Bay League in the late 1960s and early 1970s, a concerned citizens group that organized around Humboldt Bay issues.

**Butler Valley Dam****Scope and Contents note**

News clippings, correspondence, ephemera, reports and publications relating to the Tri-Lake and Butler Valley Dam proposals (described below) and the community response to these proposals in the late 1960s and early 1970s. Also includes some content regarding the Dios Rio Dam proposal for the Eel River during the same time period (also controversial when proposed and never built), and documentation of Becking's running for 3rd District Director of the Humboldt Bay Municipal Water District.

Background - Becking and Deane B. Mather proposed damming Maple Creek, Little River and Lindsay Creek for recreational, local economic development and municipal water use purposes in 1967. Their proposal was called the "Tri-Lake" proposal and was located in the Southern Recreational Area of the Regional Redwood Park Plan (RRPP). At the same time, the US Army Engineer District had proposed building a dam on the Mad River at Butler Valley for similar purposes. While Becking viewed the Tri-Lake plan as an independent project rather than a substitute plan to the Butler Valley Dam proposal, he criticized the Butler Valley Dam project as compromising water quality, fish and wildlife habitat and recreational potential in order to simply get more water to the communities of McKinleyville and Trinidad. He considered the Tri-Lake plan to offer more balance in relation to those issues. However, the Tri-Lake plan was treated by reviewers as an alternative or competing project to the Butler Valley Dam, and it was deemed to be economically infeasible by the State of California in 1968.

Becking did continue to promote the Tri-lakes idea, but as the Butler Valley Dam project moved forward in the process of getting approved and funded he also contributed to organized community efforts to oppose the dam construction. The dam was ultimately never built.

**Redwood National Park (RNP)****Scope and Contents note**

Correspondence, clippings, publications, and some scientific research efforts relating to the Redwood National Park (RNP) expansion and merger proposals in the 1970s and 1990s. Includes materials Becking kept after donating most of his Redwood National Park-related personal papers to the National Park Service at Redwood National Park.

Background - Congress established Redwood National Park (RNP) in 1968 to preserve some of the last remaining old growth redwood stands. In 1978, RNP was expanded to include roughly twice as much land as the original park. Three other redwood region parks had previously been established by the state of California: Jedidiah Smith, Del Norte Coast Redwoods, and Prairie Creek State Parks. In the 1990s, there was an effort to transfer ownership and management responsibilities of the three state parks to the National Park Service as a part of the Redwood National Park. This effort was not successful, though a Memorandum of Understanding for coordinated management was approved.

Becking was a strong and active supporter of the original establishment of the Redwood National Park and the 1978 park expansion. He was a founding member of the Emerald Creek Committee advocating proper management of the original park area and protection of the Emerald Creek Watershed (also called Harry Weir Creek) through park expansion. There was much controversy in the redwood region about the park expansion due to expected logging job losses. Becking was also active in supporting the proposal to merge the state parks into the National park system in the 1990s.

Researchers interested in this subseries may also be interested in the Becking Collection located at Redwood National Park headquarters in Orick, CA. The collection in Orick was donated by Becking to the park in 1999, and covers the original park establishment in the late 1960s with limited coverage of park expansion in the 1970s. Highlights of the Becking Collection at RNP include correspondence with policy makers relating to legislation and rationale for establishment of Redwood National Park, transcriptions of public statements, and ephemera relative to management of redwood forests produced by a range of stakeholders.

**Ancient Forests**
**Scope and Contents note**

Timber Harvest Plans with Becking's associated comments, correspondence with managing agencies and companies, correspondence with environmental leaders and organizations, and news clippings and ephemera regarding regional ancient forest controversies.

Background - Management of old growth forests in the Pacific Northwest and California became highly politicized in the 1980s and 1990s. Political controversy increased on the north Coast when Maxxam Corporation of Texas took over a local Humboldt County timber company Pacific Lumber (PL). Maxxam's management of local PL holdings included increasing the rate and amount of old growth redwood forests cut.

Environmental activism increased in the region in response, and Earth First!, the Environmental Protection and Information Center (EPIC), Forests Forever, and other groups organized to protect ancient redwood forests. Becking participated in local activist efforts to protect ancient redwood forests and to improve legal mandates regarding their management.

**Gasquet-Orleans Road (G-O Road)****Scope and Contents note**

Materials pertaining to the Gasquet-Orleans Road (G-O Road), including correspondence with anthropologist Arnold Pilling and the Northwest Indian Cemetery Protective Association Inc.. Materials Becking collected about other issues concerning local indigenous rights are also included in this subseries, including issues related to the Chilula of Redwood Creek.

Background - In the 1960s the Forest Service began plans for a road to be built between Orleans and Gasquet (nicknamed the G-O Road, alternatively spelled GO Road) which would allow them access to lands they intended to log (e.g. Eightmile and Blue Creek Units). However, the area the road was to go through and which the Forest Service hoped to log is sacred to local tribes, and these tribes and their supporters organized to stop the G-O Road from being built. Becking took interest in this controversy and gathered information about it as well as wrote letters to colleagues and politicians advocating that they support the tribes' efforts to protect their sacred lands. The G-O Road controversy went to the Supreme Court in 1988, (*Lyng v. Northwest Indian Cemetery Protective Association Inc.*). The Supreme Court did not rule in favor of the Northwest Indian Cemetery Protective Association Inc. Some of the land was included in the California Wilderness Act of 1984, and in the early nineties the Smith River National Recreation Area further prevented the Forest Service access to the lands they were interested in logging. In the end, the G-O Road construction was started but never completed.

**Herbicides****Scope and Contents note**

Materials from a presentation at the Vegetation Management Conference on November 23, 1989 (Becking spoke about the use of herbicides in forestry) and other materials he gathered about herbicide use in land management. Becking was concerned about the negative health impacts associated with herbicides and advocated that land managers use alternatives to chemicals for vegetation management.

**Forest Practices Act****Scope and Contents note**

Correspondence between Becking and members of the California legislature about the mid-1970s revision of the Forest Practices Act, and information and correspondence about regulation of forestry in California up to the 2000s. California's Forest Practices Act was revised partially due to a lawsuit that Becking was involved in that resulted in the law being declared unconstitutional.

|                   | Curriculum materials, handouts, and student work associated with Forestry and Natural Resources courses Becking taught from the late 1950s through the late 1990s. Primarily covering Becking's teaching at HSU, with some material in the Forestry subseries from his brief teaching positions at the University of New Hampshire and Auburn University in the late 1950s. Becking taught in the Forestry department at Humboldt State University from 1960-1970, and in the Natural Resources department until the late 1990s.                       |
|                   | Becking incorporated many of his research pursuits into his teaching, and his assignments and course activities often resulted in usable data and information. Concepts and approaches that were central to Becking's scientific work such as Phytosociology and creating soil profiles (sputograms) were taught throughout Becking's courses. Becking designed coursework involving significant data collection in local natural areas, including Freshwater Forest, Arcata Community Forest, Samoa Sand Dunes, and many more Humboldt County places. |
|                   | This series also has content that is informative about relationships between faculty members in the Forestry and Natural Resources departments during the time of Becking's teaching career at HSU.  |

**Freshwater Forest Cruise**
**Scope and Contents note**

Materials related to the Freshwater Forest "Continuous Forest Inventory" (CFI) include a plot manual describing how the CFI was conducted (including sample data tables, references and explanations of methodology), correspondence, aerial photographs of plot locations in Freshwater Forest, a local volume table based on the CFI data, and more. The Freshwater Forest CFI data was gathered by students between 1960 and 1969. The data includes (in Becking's words): "measurements of some 700 sample trees of the five tree species of the redwood forests of all crown classes". Becking also referred to this body of data as the 100% Forest Inventory or 100% Cruise, and described it as providing the "possibility of determining the periodic growth of a forest from the results of successive inventories".

Becking included two notes about the Freshwater Forest data when he donated that set of materials to the Humboldt State University Library. The first note read: "These are the only periodic printouts from the 100% Cruise Data of the HSU Freshwater Forest. These areas have [been] cruised 2-3x from 1962-1970. If the computer tape works these data can be extracted from the large magnetic tape drive". The second note read: "Printed HSU School Forest Inventories. If not possible to retrieve from HSU Admin Computer, these will become the only available inventories".

Please note that materials related to the Freshwater Forest Inventory can be found throughout Teaching : Forestry, and researchers interested in the Freshwater Forest CFI/100% Cruise should refer to the entire subseries and not just those sections where most of the data is grouped together.

**Natural Resources / Resources Planning and Interpretation (NR/RPI)****Scope and Contents note**

Courses Becking taught in the Natural Resources department included Natural Resources Conservation, Man and the Land, Ecosystem Analysis, Ecology of the Redwood Biome, Natural Resources Recreation, RPI Seminar, Tropical Forestry Ecology, Shifting Agriculture, People and the Land, Soil Survey Interpretation, Elementary Biometry, Research Proposal Writing, Senior Seminar, and Environmental Impact Assessment. This list may not be comprehensive.

**Instructional Materials****Scope and Contents note**

Contents noted by the processing archivist include:

Classroom Handouts: RWB numbered documents - This set of material includes Becking-authored handouts for his Natural Resources classes at HSU. He used many of his handouts for multiple classes, and incorporated ideas and topics Becking had personal interest in. These included local municipal topics such as wastewater treatment, Humboldt County Economy, the Eureka Waterfront, and other topics. They also include information about local places such as Humboldt Bay, HSU Freshwater Forest, Cheatham Grove, Redwood National Park, Humboldt Redwoods State Park, Samoa Dunes, the Simpson Demonstration Forest, and many other locations. Many of the core concepts important to Becking (as evidenced by his manuscripts and research pursuits) appear in these handouts. Becking numbered his handouts with unique identifiers that followed the pattern of this example: RWB #134. There are 139 handouts in this set in the Natural Resources subseries, originally kept in three large binders. Becking did use documents that utilized this numbering format in his Forestry classes, as well, but this particular set refers only to their use in Natural Resources (including RPI) courses after 1970.

PL Logging in Freshwater Forest - When he was with the Forestry department, Becking coordinated a Continuous Forest Inventory of Freshwater Forest (as referenced in the above description of the Teaching : Forestry subseries). In the Teaching : Natural Resources subseries, there is a small set of materials relating to logging in Freshwater Forest by Pacific Lumber in 1974. These materials include correspondence and historical Freshwater Forest data Becking gathered. These materials include reference to Becking wanting to re-inventory existing CFI plots before they were logged, correspondence regarding historical Freshwater Forest data (ca. 1920s) gathered in order to re-measure for second-growth redwood studies, and letters from Becking to Jerry Partain about Becking's proposal to teach a Forestry course that would involve students thinning a 40 acre section of Freshwater Forest according to all-aged management principles. This set of materials, originally in a single large binder, included a history of Freshwater Forest ownership and management probably written by Becking.

Bird Inventories - Included in this subseries are bird inventories and surveys, including spotted owl survey data. There is limited correspondence or background material relating to this work, so it is not conclusive how Becking used this material in his teaching or if he used all of it in the teaching context at all. However, enough of this material is clearly linked to specific courses that it is included in the teaching series. Most of the data collected is in Becking's handwriting. Also, in the Bird Maps folders is content regarding Becking's ideas about how the Forestry faculty could use Freshwater Forest in coordinated curriculum efforts, including doing timber harvest demonstrations of all-aged and even-aged timber management.

**Student Work****Scope and Contents note**

Reports and term papers that were placed on library reserve each semester for students to refer to. Becking included two notes about this material when he initially donated it to the HSU library. The first note read: "Student Reports/term papers, Student evaluations of course and teacher, student exams - all put officially on open file in HSU Library of the former class. Substantial protest (anonymous) by NR Faculty and officially being investigated by Faculty Committee as to grades too high, incompetence to deal with subject matter like land use population control, environmental impact and elaborate field work every lab session. Interesting that course quality improved from 1970-1990! - Rudi. Reports were later required in Word Perfect while Word Perfect was not required in the NR Curriculum? Students loved computers WP!" The second note read: "Mostly Student papers. - First beginnings of 'ecosystem' concept and interdisciplinary approach! -Interesting comparisons over years as to student perceptions...-Rudi".

**Becking Digital Collection** Series 6

**Scope and Contents note**

Becking's digital files relate directly to many of the series described above. There is some duplication in the computer files of items in the paper files, but there is primarily unique material in these digital files. Researchers should use the paper files first, and should read the digital collection processor's [notes](#) to guide their use of the digital files.

**Cassettes Series 7****Scope and Contents note**

Becking kept sound recordings of some meetings he spoke at, attended, or was otherwise interested in. The recordings relate to many of the series described above for the paper files. There is a wide range of sound quality on the cassettes, with some duplicate content. The cassettes are grouped according to topic. Digital versions of each cassette are included on CDs for use by researchers.

**Processing Information note**

The Processing Archivist listened to portions of each side of each tape to appraise and describe them. The HSU Archivist listened to select tapes for further appraisal and made cassette copies of those tapes. One transcription was generated from a cassette entitled "Redwood Creek Chilula Site Oct 76".

Digital copies were made of all cassettes using the following methods:

Equipment:

1. Cassette player: SONY Stereo Cassette Deck TC-WE475
2. Computer: Dell Dimension E521 with standard issue sound card
3. ProcessSoftware: Audacity 1.3.13 Beta

Process:

1. Entire contents of cassette were recorded as an Audacity Project file.
2. Undesired content such as silence and unrelated sections of tape were deleted.
3. When applicable, separate tracks were created to indicate the difference between the two sides of the cassette.
4. The project tracks were exported as WAV files.
5. When significant differences in input levels were identified in a single cassette recording, the "Compressor Effect" tool of the Audacity software was used. This tool compresses the dynamic range of the audio content, in some cases improving sound quality.
6. The audio content was then burned to CD, labeled, and tied with cotton string to the companion cassette for storage.
