Biographical/Historical note
Bernard Judge (1931-) is a Los Angeles architect who was born in New York City and grew up in Fontainbleau, France; Managua, Nicaragua; and Mexico City. His father was an architect and helped Judge obtain a job, after high school, working with Harrison and Abramovitz on the United Nations building in New York City. After attending L'Ecole des Beaux Arts in Paris, Judge completed his architectural studies at the University of Southern California (USC) in 1960.
While still a student at USC, Judge began working on the "Triponent/Dome House" inspired by the geodesic domes designed by Buckminster Fuller. Judge built the Dome House himself, with the help of USC fellow students, in the Hollywood Hills and lived there for a short period. Several architectural journals and popular publications published the Dome, including the Los Angeles Times Home Magazine.

Judge started his own architectural firm, The Environmental Systems Group, in 1965. He concentrated on residential and commercial design with a focus on local environments and culture. Judge also has done preservation work. He developed the first detailed study for saving and preserving Rudolph Schindler's King's Road House, where Judge had lived during the 1960s. In 1968, he began work on his own, second, Los Angeles residence, which he called the Tree House, for which he was awarded a U.S. patent. The house, a prototype designed to be suitable in various terrains, as a single dwelling or grouped for multiple dwellings, was featured in Sunset magazine, among other publications. His focus on environmentally sensitive design led to a decades long project beginning in the 1970s for the actor Marlon Brando, who wanted to build a resort on the Tahitian atoll of Tetiaroa. Not all of Judge's plans for Tetiaroa were realized, but he continued to work on the project until the 1990s. Judge published a memoir in 2011, Dancing with Brando, which describes the project and his experiences in Tahiti and with Brando.

Scope and Contents note
The Bernard Judge papers span 40 linear feet and date from circa 1959 to circa 1999. The collection includes his personal papers, correspondence, research files, newspaper and magazine clippings, photographs, sketches, architectural drawings and presentation boards. The bulk of the material relates to three projects which served as intensive research and design experiences for Judge: the Dome house; the Tree House; and designs for Marlon Brando of a residence and resort in Tahiti, on Tetiaroa. The collection also includes drawings and other materials related to nearly 20 other projects designed by Judge for sites in the U.S., Canada, and Tahiti.

Arrangement note
The following arrangement scheme for this collection was imposed during processing in the absence of a usable original order. The collection is organized in five series: personal papers, Dome house, Judge house, other architectural projects, and Tetiaroa. The series are organized chronologically. The content that pertains to each project is arranged by format (for example: drawings, photographs, magazine clippings) and then by date.

Dome House (Los Angeles, Calif.) Series 2: 1954-1972

Scope and Contents note
The Dome house was designed and built by Judge when he was still a student in the School of Architecture at the University of Southern California (USC). After meeting Buckminster Fuller and explaining to him his plan for using a geodesic dome for a hillside house, Fuller gave Judge parts of a dome that had been constructed earlier by some of Fuller's students. Using the parts, Judge designed and built, with USC fellow students, a house for himself and his wife in the Hollywood Hills of Los Angeles. It became well-known through published photographs in the Los Angeles Times and Life magazine, as well as other publications. Files contain papers, clippings, photographs, and drawings related to Judge's research, calculations, planning, design, and building of the Dome house.

**Architectural Drawings 1967-1998**

Physical Description: 19.0 Linear feet (14 half record storage boxes, 2 flat file drawers and 1 roll)

Scope and Contents note

A large portion of Judge's architectural files relate to work that he did for Marlon Brando on the atoll of Tetiaroa, Tahiti. Brando owned the atoll and commissioned Judge to design a house, and resort hotel that would sit lightly on the land without disturbing the delicate eco-sytem. Much of Judge's research relates to the ecology, water, flora and fauna, climate of Tetiaroa. Drawings and printed matter were produced for a master plan that was used to try to attract investors for the resort. Several building were designed, a few were built.
